

SC4 completes 80-bed care home in Salisbury... ...moves straight on to 71 bed BUPA care home in Southampton & wins contract for Church Crookham!

When it comes to residential care, people are looking for names that they can trust to provide a professional and responsive service, with that extra attention to detail that makes such a difference. And leading providers in the care industry expect those same high standards to be applied in the construction of their new care homes.

With a decade's worth of satisfied customers across the South of England, SC4 Carpenters Ltd has an enviable track record in providing high quality carpentry services to construction companies working in the residential care sector.

Between April 2008 and November 2008, on behalf of its client Alaway Construction Ltd, SC4 completed an 80-bed care home in Salisbury.

SC4 understands that the small details in design and construction can make a big difference to staff and residents once a building is in operation, and always works closely with clients to share its experience and provide innovative solutions.

Features in Salisbury include lighted pigeon holes, and swing doors with quick release keeps for easy access.

SC4 is now midway through a 71-bed BUPA residential care home in Southampton, on behalf of another client Redworth Construction Ltd. Decoration is also being carried out by SC4 Decorators. Features in the Southampton building include a main oak staircase with feature 'over-newel' handrails. SC4 will also supply and fit the oak nurse station and reception desks.

SC4 has recently won a contract for a further 65-bed BUPA care home in Church Crookham, again on behalf of Redworth.
